AutoCAD Architecture The basic user interface consists of the screen, menus, and palettes, all displayed in a window on the computer desktop. AutoCAD is multi-platform, meaning it can run on multiple computer platforms: Windows (Windows 7, Windows 8, Windows 10), macOS (Mac OS X), Linux, Solaris, and other operating systems. AutoCAD features a drawing window for creating drawings (see figure), which includes tools for drawing rectangles, circles, ellipses, arcs, splines, and lines. Vector objects are drawn as closed paths (loops) that can be composed together to represent more complex geometric shapes and objects. Vector objects include shapes, lines, and text. The object type can be customized, which allows users to create custom objects. Users can also manually edit the object as they work. Any custom object can be linked to another drawing via the link feature. Figure 1. AutoCAD Architecture Figure 2. Drawing Frame Figure 3. Object Palette Figure 4. Drawing View and Zoom Figure 5. They allow users to ignore or hide, change the color, change the size, and apply special effects to the objects. These filters may be applied at the object level, the layer level, or the drawing level. Figure 13. Drawing Filters Figure 14. Drawing Filter Dialog Figure 15. Drawing Filter Wizard Figure 16. Kikai is also a Japanese term used for a figure of a mythological bird, the kikai. In mythology, the kikai is said to be the actual representative of a demon. In other words, it is the kikai that the demon has incarnated to be a human. The word Kikai is also the kanji for "deity" and "ghost". The kikai is the inspiration for the famous device known as the kikai-bō, which is used to drive away evil spirits. The kikai is believed to have been a winged serpentine bird that attacked people. It has also been an eel, an insect, and a flying bird, among others. It has been used to represent many different figures, including the demon Shukumine, the bird god Takemaru, and the god Gosechi. In popular Japanese culture, it also serves as the mascot of Bandai's Dengeki Bunko label of light novels, magazines, and games. It appears on the Dengeki Bunko label logo with a more anthropomorphic depiction than on the real products. The Kanji for kikai is pronounced the same as the Kanji for "ghost" (Kegare). The name Kikai (ケイカイ) can also mean "devil" when combined with the suffix "-zai" (ザイ). Other uses In Kanji, Kikai is also a kanji meaning "deity", and can also be used to write the word "ghost" (ケイカイ). a1d647c40b
